AMENDMENTS TO THE CLAIMS

The current listing of the claims replaces all previous amendments and listings of the claims.

- 1. (Currently Amended) An outer tube, which is made of silicon carbide, and which has an upper portion closed and a lower portion opened, has the lower portion formed with a tapered portion so as to expand a diameter thereof toward a lower end thereof, and has a flange formed on an outer peripheral side of the lower portion; the following conditions being met:
 - 1) a ratio of t_a/D_1 is from 0.0067 to 0.025,
 - 2) a product of $t_a \times D_1$ is from 600 to 4,000 (mm²),
 - 3) $(D_{F2}-D_{F1})\times t_c/(D_1\times t_a)$ is from 0.1 to 0.7, and
 - 4) L_1/L_2 is from 1 to 10;

where the outer tube has a thickness of t_a (mm) and an inner diameter of D_1 (mm), the flange has a thickness of t_c (mm), an inner diameter of D_{F1} (mm) and an outer diameter of D_{F2} (mm), and the tapered portion has a height L_1 (mm) and an expanse of L_2 (mm), and where the outer tube is configured to be used in a thermal treatment system.

- 2. (Original) The outer tube according to Claim 1, wherein the tapered portion has upper and lower edges of an inner peripheral side rounded with a radius of 2 mm (R2) or above.
- 3. (Original) The outer tube according to Claim 1, wherein the tapered portion has an inner surface having a surface roughness Ra of not greater than 7 μ m.
- 4. (Original) A thermal treatment system using an outer tube, which is made of silicon carbide, and which has an upper portion closed and a lower portion opened, has the lower portion formed with a tapered portion so as to expand a diameter thereof toward a

2

lower end thereof, and has a flange formed on an outer peripheral side of the lower portion; the following conditions being met:

- 1) a ratio of t_a/D_1 is from 0.0067 to 0.025,
- 2) a product of $t_a \times D_1$ is from 600 to 4,000 (mm²),
- 3) $(D_{F2} D_{F1}) \times t_c / (D_1 \times t_a)$ is from 0.1 to 0.7, and
- 4) L_1/L_2 is from 1 to 10;

where the outer tube has a thickness of t_a (mm) and an inner diameter of D_1 (mm), the flange has a thickness of t_c (mm), an inner diameter of D_{F1} (mm) and an outer diameter of D_{F2} (mm), and the tapered portion has a height L_1 (mm) and an expanse of L_2 (mm).

- 5. (Original) The thermal treatment system according to Claim 4, wherein the tapered portion has upper and lower edges of an inner peripheral side rounded with a radius of 2 mm (R2) or above.
- 6. (Original) The thermal treatment system according to Claim 4, wherein the tapered portion has an inner peripheral side having a surface roughness Ra of not greater than $7 \mu m$.
- 7. (Original) The thermal treatment system according to Claim 4, wherein the height L_1 of the tapered portion satisfies the relationship of H/4< L_1 <3 H/4, where a distance between a lowest end of a heater and a bottom surface of the outer tube is H (mm).
